Over the past ten years I have built everything from flash sites to fully scalable systems through building IE6 and have had more sleepless nights than I can count. I wouldn't change anything.

Experience

Frontend Team Lead – Adeptmind   *Sep 2017 → Current*
node.js, reactjs, javascript, css

I am leading the development and execution of our multiple platform ecommerce app. We create React components and automatically inject them onto a stores site when they enable our app. With the app there is a customization backend where the store has many fields they are able to edit the layout and style of the components. In addition to our app, I have build internal tools for the machine learning team and a portal for our account and sales team to easily communicate with clients that need to troubleshoot our app.

Owner – Rebel Pixel   *Apr 2015 → Current*
wordpress, android, html, css, javascript

In 2015 I started getting more and more project inquires so I finally needed to register my own company, Rebel Pixel was born. I mainly took on site builds, mostly on Wordpress, but I also had the chance to build my first native Android app which was an unforgettable experience. In the future, I'd like to make Rebel Pixel more of an R&D company pushing the limits of tech and building open source frameworks and modules.

Senior Software Developer – Konrad Group   *Aug 2016 → Sep 2017*
reactjs, angular, wordpress, node.js, amazon-ec2, php

During my time at Konrad, I built a highly interactive site for the sick kids foundation and I am currently the Dev lead on a publication site and job board called Techvibes. While working on Techvibes we have, rebuilt the algorithm to select jobs for candidates, built out that ability to send relevant job alerts to candidates, rebuilt and skinned the admin area with React, and completely reskinned the publication site and the job board.

Tech Lead – Dashboard   *Oct 2013 → May 2016*
javascript, node.js, mongodb, postgresql, html, css, zurb-foundation

I was Tech lead at Dashboard for a little less than 3 years. I was responsible for hiring new developers, mentoring the junior developers, scheduling and resourcing to meet deadlines, day-to-day programming and architecting the Octane framework. It was an extremely busy time, full of learning and experiences, allowing me to grow into a team lead.

Developer – Dashboard   *May 2009 → Oct 2013*
html, css3, javascript, java, jquery, php, mysql, coffeescript

I started at Dashboard about a month after finishing the Humber College certificate program. Dashboard came in and talked to our class midway through the program. At the time they were one of the best flash shops in Toronto, which increased my desire to work there. During the first year at Dashboard I was helping out the senior developers, with whatever they needed. One of the things I had to do early on was build a Facebook Connect app without having Facebook account. Over the next little bit I was responsible to maintain Glovebox V1 sites, as well as build smaller sites that came through. The first project I lead was Rocscience, which was a huge challenge and learning experience. Later on in my time at Dashboard, I was able to design and architect the next iteration of Glovebox and was maintaining it full-time.

Education

Web design, development and maintenance certificate – Humber College   *2008 → 2009*

This was an accelerated 6 month program, which taught all of the basics in web development and design. Originally, I wanted to get into graphic design and enrolled in the course for the sole purpose to know how to code a little bit. Shortly after starting the program, I fell in love with coding and have never looked back.

Projects & Interests
